

Spatial exploration of the tumor microenvironment in renal cell cancer

Practical guide for Visium spatial transcriptomics assays and analysis

Maxime Meylan, Florent Petitprez, Etienne Becht, Antoine Bougouin, Ilenia Giglioli, Virginie Verkarre, Guillaume Lacroix, Johanna Verneau, Chen-Ming Sun, Pierre Laurent-Puig, Yann Vano, Reza Elaïdi, Arnaud Méjean, Rafaël Sanchez-Salas, Eric Barret, Xavier Cathelineau, Stephane Oudard, Claude-Agnès Reynaud, Aurélien de Reyniès, Catherine Sautès-Fridman, Wolf Herman Fridman

Outline

Biological context

Project overview

Practical guide on Visium assays

Bioinformatics methods

Preliminary biological results

B cells and TLS are associated with response to immunotherapy

TLS are the marker of SIC E

Potential roles of B cells and TLS

Fridman WH. et al. B cells and cancer: To B or not to B? Journal of Experimental Medicine 2021

Sautès-Fridman C. et al. Tertiary Lymphoid Structures and B cells: Clinical impact and therapeutic modulation in cancer. Seminars in Immunology 2020

Meylan et al., in revision, please do not post

In the presence of tertiary lymphoid structures

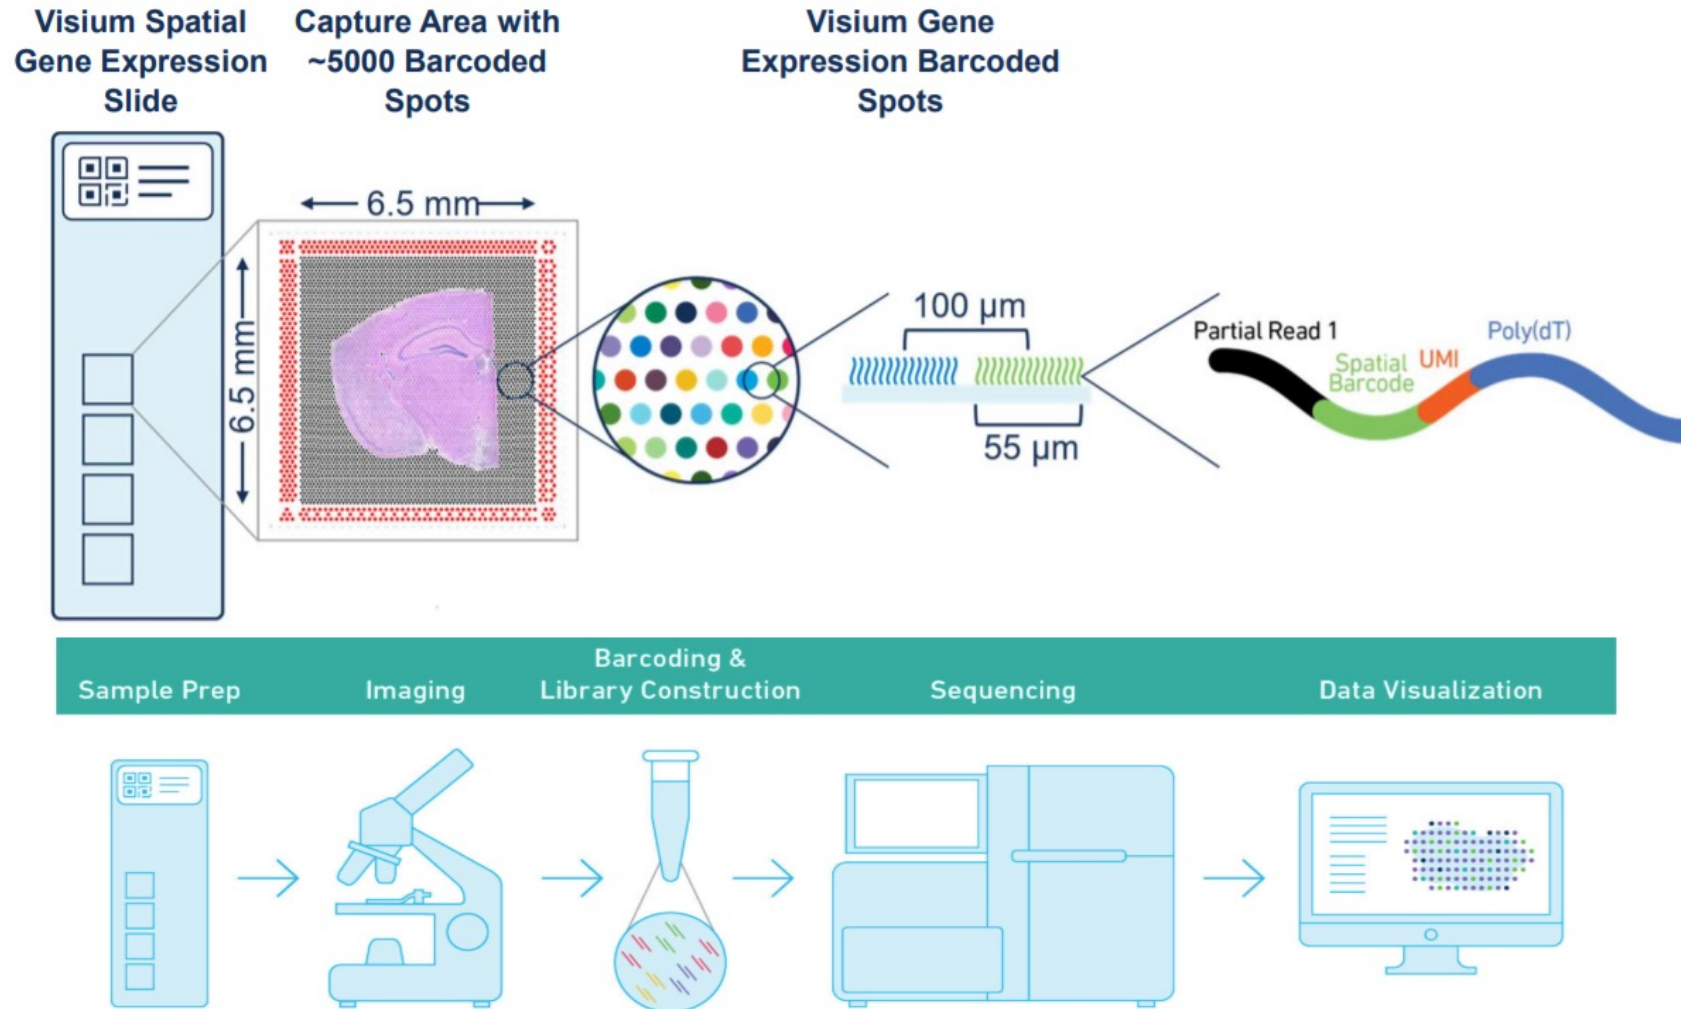

What is the spatial organization of the TME?

What are the roles of the B cell lineage?

What are the cellular partners of the B cell lineage?

How do TLS and B cells impact the TME?

Visium spatial transcriptomics

Practical guide on Visium assays

- 1st step : Sample selection
 - RNA quality (frozen: RIN > 7 / FFPE: DV200 > 50)

Practical guide on Visium assays

- 1st step : Sample selection
 - RNA quality (frozen: RIN > 7 / FFPE: DV200 > 50%)
 - Size/shape of the tissue (large, square, compact, low fat/necrosis)

Practical guide on Visium assays

- 1st step : Sample selection
 - RNA quality (frozen: RIN > 7 / FFPE: DV200 > 50%)
 - Size/shape of the tissue (large, square, compact, low fat/necrosis)
 - Test presence of structures of interest (H&E or other stainings)

Data pre-processing

- SpaceRanger pipeline on demultiplexed fastq's
 - Image to data Alignment file (.json)
 - Fastqs
 - Slide ID and capture area ID
 - Reference transcriptome

input

```
cd /home/jdoe/runs
spaceranger count --id=sample345 \
  --transcriptome=/opt/refdata/GRCh38-3.0.0 \
  --fastqs=/home/jdoe/runs/HAWT7ADXX/outs/fastq_path \
  --sample=mysample \
  --image=/home/jdoe/runs/images/sample345.tif \
  --slide=V19J01-123 \
  --area=A1 \
  --loupe-alignment=sample345.json \
  --localcores=8 \
  --localmem=64
```

  --localmem=64
```

output

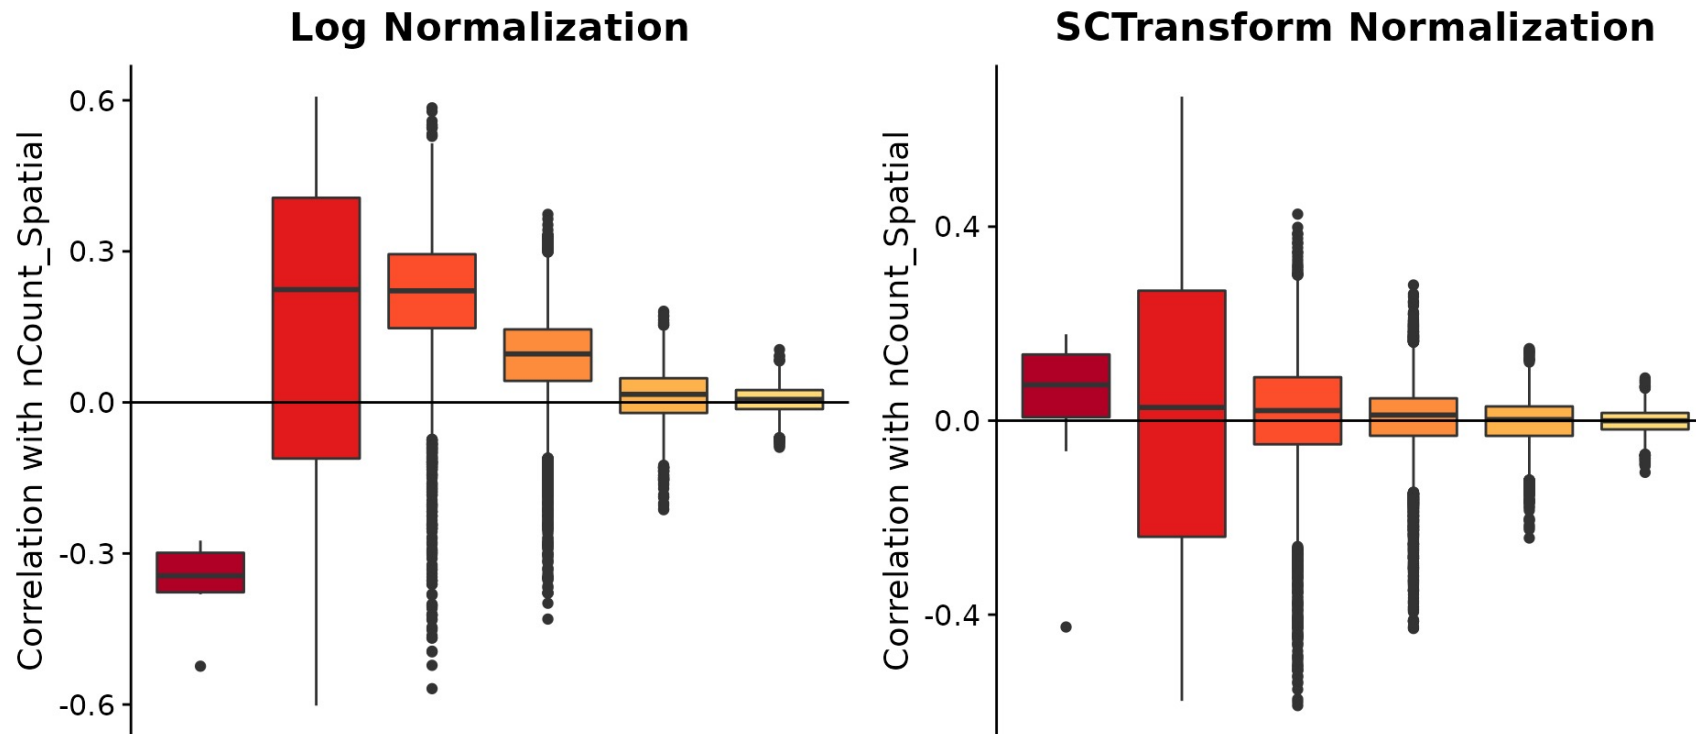

```
Outputs:
- Run summary HTML: /opt/sample345/outs/web_summary.html
- Outputs of spatial pipeline: /opt/sample345/outs/spatial
- Run summary CSV: /opt/sample345/outs/metrics_summary.csv
- BAM: /opt/sample345/outs/possorted_genome_bam.bam
- BAM index: /opt/sample345/outs/possorted_genome_bam.bam.bai
- Filtered feature-barcode matrices MEX: /opt/sample345/outs/filtered_feature_bc_matrix
- Filtered feature-barcode matrices HDF5: /opt/sample345/outs/filtered_feature_bc_matrix.h5
- Unfiltered feature-barcode matrices MEX: /opt/sample345/outs/raw_feature_bc_matrix
- Unfiltered feature-barcode matrices HDF5: /opt/sample345/outs/raw_feature_bc_matrix.h5
- Secondary analysis output CSV: /opt/sample345/outs/analysis
- Per-molecule read information: /opt/sample345/outs/molecule_info.h5
- Loupe Browser file: /opt/sample345/outs/cloupe.cloupe
- Spatial Enrichment using Moran's I file: /opt/sample345/outs/spatial_enrichment.csv
```

Data processing with Seurat 4.0.2

- Import “outs” directory with *Load10X_Spatial*
- Filter out spots with high mitochondrial content (> 30%)
→ Correlation with necrosis areas
- Remove genes with less than 5 counts
- Remove spots with less than 300 genes

Normalization with SCT on Brain datasets

Normalization and variation stabilisation using regularized negative binomial models

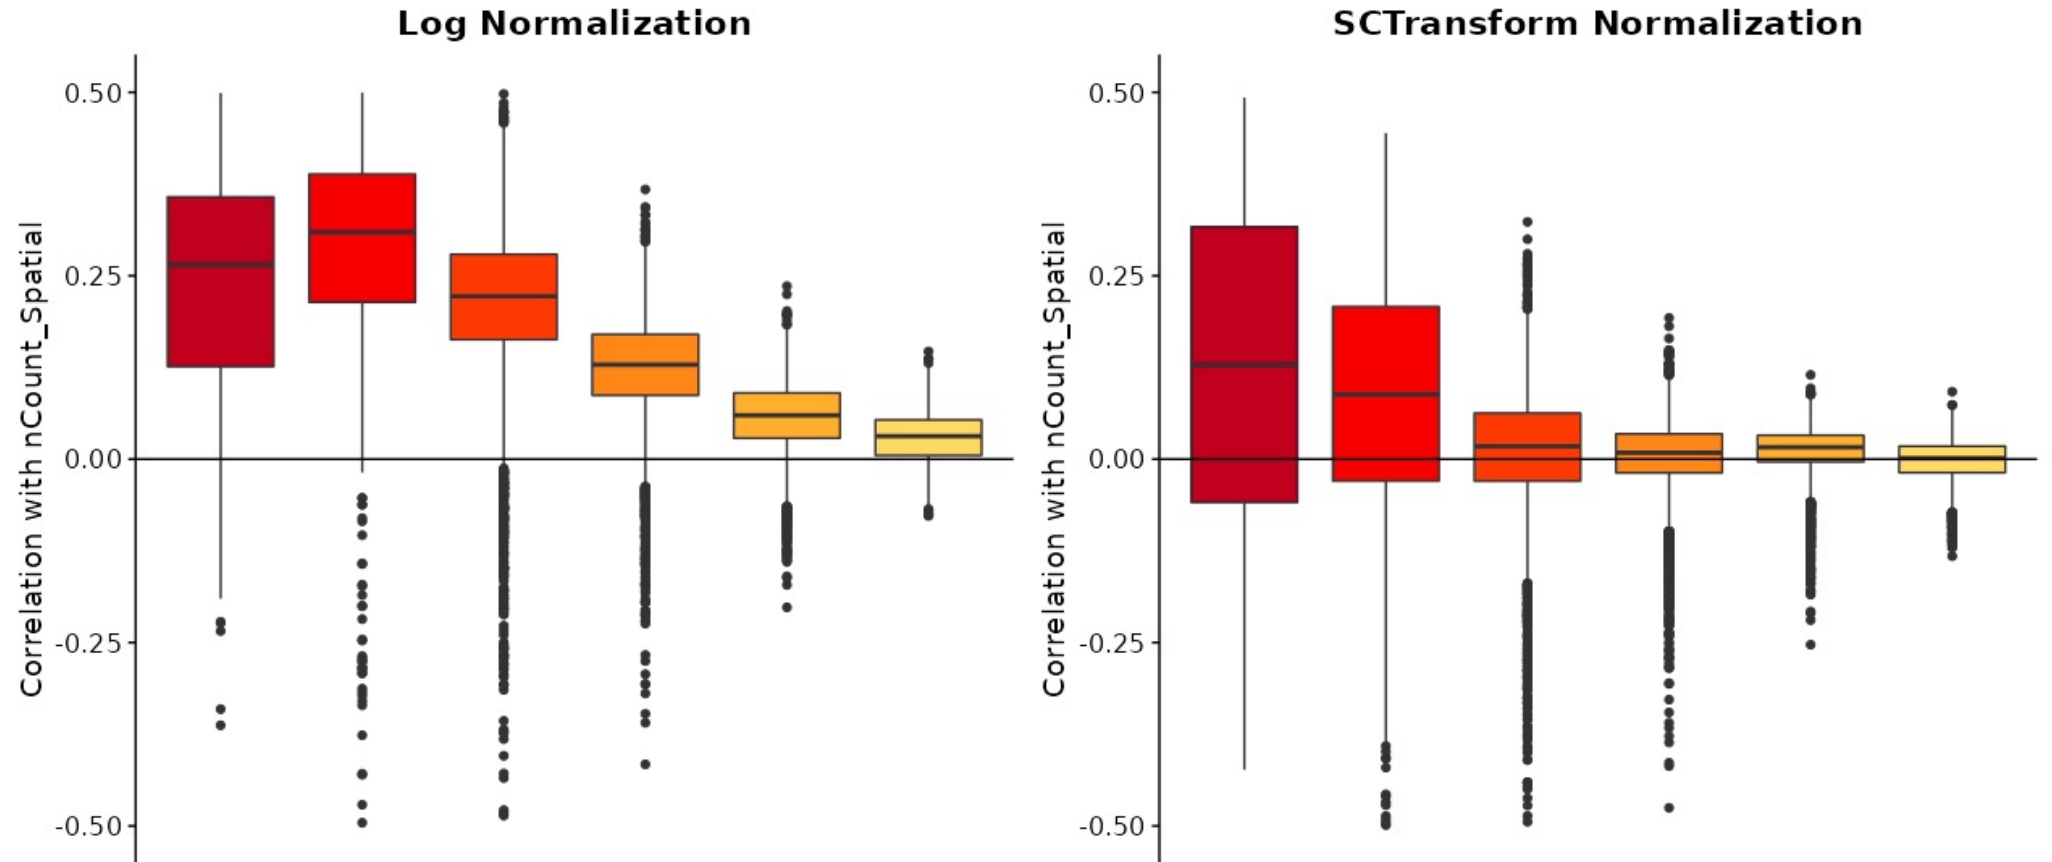

From Seurat vignettes

“We propose that the Pearson residuals from “regularized negative binomial regression,” where cellular sequencing depth is utilized as a covariate in a generalized linear model, successfully remove the influence of technical characteristics from downstream analyses while preserving biological heterogeneity.”

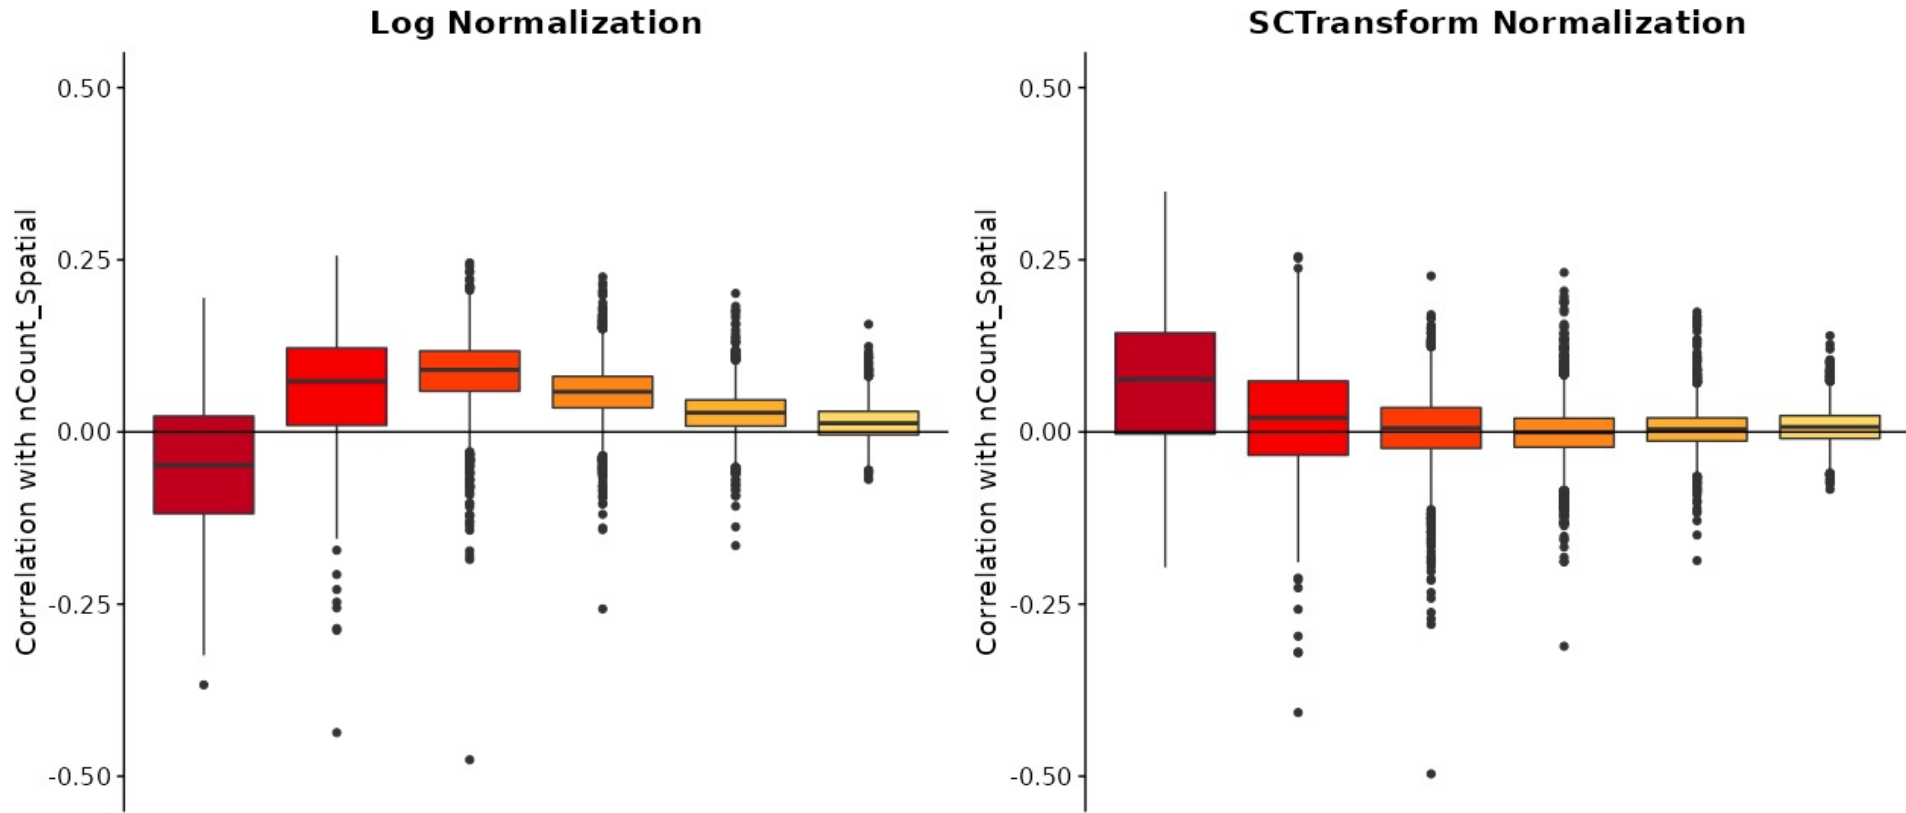

Normalization with SCT applied to Frozen sample

Tumor 1

Normalization with SCT applied to **Frozen** sample

Tumor 2

Normalization with SCT applied **FFPE** sample

Tumor 3
